work is now being done
to make the Sfântul Gheorghe branch of the Danube delta navigable to
large tonnage ships and warehouses. The plans for this were made by the
Soviets. The work will not be very difficult because the current is not
as strong there as it is in the Sulina branch. The main thing is to
strengthen the banks of the /Sfântul Gheorghe/ branch in several places.
The plan also provides for openings for canals to be cut only in two
places, and this has already been started.
